

From the informational paradigm to the paradigm of corporeal signifiers: a topical tool for the researcher on High Dilution

Richard Blostin

GEB/AFVAC, Champagne sur Seine , France

ABSTRACT

The paradigm of corporeal signifiers of Madeleine Bastide and Agnès Lagache is very close to the informational paradigm of Claude Levy-Strauss. We will show that this paradigm is compatible with the main results of the research on High Dilution. It can be a very good tool to locate the different studies on HD and can be of great help for the researcher. The paradigm shows us that the future must also be part of basic research; but it seems important to differentiate experimental studies and basic research. This basic research has to be organized along with conventional researchers, experts in their own areas.
