Informational paradigm, practice and basic research

Richard Blostin

Email: richardblostin@free.fr

The paradigm of corporeal signifiers of Madeleine Bastide and Agnès Lagache is very near from the informational paradigm of Claude Levy-Strauss. We will show that this paradigm is compatible with the main results on high dilution (HD). It can be a very good tool to place the different studies on HD and could be a great help for the researcher. For the future, it seems important to differentiate between experimental studies and basic research. The paradigm shows us that the future must be too in basic research; probably this basis research must be organized with conventional research.
